| 1. What term is used for things which can be broken down by light? Answer: photodegradable                         |  |  |  |  |  |  |  |
|                                                                                                                    |  |  |  |  |  |  |  |
|                                                                                                                    |  |  |  |  |  |  |  |
|                                                                                                                    |  |  |  |  |  |  |  |
|                                                                                                                    |  |  |  |  |  |  |  |
|                                                                                                                    |  |  |  |  |  |  |  |
|                                                                                                                    |  |  |  |  |  |  |  |
|                                                                                                                    |  |  |  |  |  |  |  |
|                                                                                                                    |  |  |  |  |  |  |  |
|                                                                                                                    |  |  |  |  |  |  |  |
|                                                                                                                    |  |  |  |  |  |  |  |
|                                                                                                                    |  |  |  |  |  |  |  |
| 2. What material do see turtles seem to mistake for inllufish?                                                     |  |  |  |  |  |  |  |
| 2. What material do sea turtles seem to mistake for jellyfish? Answer: plastics, plastic, or plastic bags will do! |  |  |  |  |  |  |  |
|                                                                                                                    |  |  |  |  |  |  |  |

Here are the answers to the last quiz. You have to keep scrolling down. I did that so you don't

automatically see the answer to the next question by accident. The answers to all 10 questions are here

| 3. What are solid bits of plastic less than I millimeter in size (0.0393701 of an inch) called? Answer: microbeads |  |
|--------------------------------------------------------------------------------------------------------------------|--|
|                                                                                                                    |  |
|                                                                                                                    |  |
|                                                                                                                    |  |

| 4. What kind of chemical is involved with Minamata disease?                                                                |
|----------------------------------------------------------------------------------------------------------------------------|
| Answer: mercury                                                                                                            |
|                                                                                                                            |
|                                                                                                                            |
|                                                                                                                            |
|                                                                                                                            |
|                                                                                                                            |
|                                                                                                                            |
|                                                                                                                            |
|                                                                                                                            |
|                                                                                                                            |
|                                                                                                                            |
|                                                                                                                            |
|                                                                                                                            |
|                                                                                                                            |
|                                                                                                                            |
| 5. What kind of pollution occured when the tsunamistruck Fukushima and damage the Dai Ichi power plant?  Answer: radiation |

6. What is the major source of oil pollution in the ocean? Answer: "runoff from the land" or just ","land",or "the land" or

7. What was the worst oil spill to date? Answer: Deepwater Horizon

| 8. What are the floating, physical barriers to oil, made of plastic, metal, or other materials, which slow the spread of oil and keep it contained.                       |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Answer: booms                                                                                                                                                             |
|                                                                                                                                                                           |
|                                                                                                                                                                           |
|                                                                                                                                                                           |
|                                                                                                                                                                           |
| 9. What are nonindigenous aquatic species that pose significant ecological and economic threats to aquatic ecosystems called? Answer: "ANS" or "aquatic nuisance species" |
|                                                                                                                                                                           |

| 10. What term is used taken into it. | to describe something | attaches to the outsic | de of some material, ra | ather than be |
|--------------------------------------|-----------------------|------------------------|-------------------------|---------------|
| Answer: adsorbtion                   |                       |                        |                         |               |
|                                      |                       |                        |                         |               |
|                                      |                       |                        |                         |               |
