

Homework #0 :

A. Please send an email to Mr Patitucci at rpatitucci@brooklyn.cuny.edu with your emplid and name and he will give you your UNIX account information. We will use this on the first day of class to learn how to use UNIX and will allow you to follow what I'm doing. If you have any trouble doing this, please email me.

B. Please submit an email to Mermelstein.homework@gmail.com answering the following questions:

1. Your full legal name (the name that appears on your BC official business)
2. The first name that you would like me to call you (even if this is the same as your legal name)
3. Your major (write undecided if you haven't declared yet)
4. Did you take CISC 1115 and pass it with a grade of C or higher? (This is the prerequisite class.

If you're answering "no," you can't take this class.)

5. Are you or have you taken precalculus? (Doesn't matter if the answer is no, but if not and you're a CS major, you should try to take it ASAP to make progress in the degree.)
6. What you would hope to learn in this class / what you hope to get out of this class. ("I'm taking this because it's part of my degree program" is a legitimate answer, but if you can give me a more detailed response, that would be even better.)
7. Any questions/ comments/ concerns that you have.

Please send your email to mermelstein.homework@gmail.com with the subject line:
3115— Your name
