CIS 1.5 Fall 2009 Lab I.1

1. The very first thing

    - Copy the "hello world" program that we discussed in class.
    - Be careful to follow the instructions on how to use Code::Blocks in the handout I gave you.
    - Save the file that contains the program in `hello.cpp`.
    - Compile and run your program.

2. Another message

    - Start with the program from the previous step and create a new program file called **words.cpp**.
    - Modify the `main()` to include several messages.
    - Print whatever you want — go on, be creative!
    - Compile and test your code
