

CIS 15 Spring 2010 Lab V.3

1. Multiple Inheritance (part 1).

- Take Lab V.2 and add a new class `parent`
- Give `parent` the attribute `child`.
- Make `professor` inherit from `parent` as well as from `person`.
- Make the `print` function of `professor` print the name of the professor's child.

2. Multiple Inheritance (part 2).

- Add the class `adjunct`, which inherits from `student` and `professor`.
- Instantiate an `adjunct` object and use the existing `print` functions to print out the attributes of the object.
