

MC140: lecture #7

today's topic:

*pre and post incrementing and decrementing
if and if/else
flow charts
pseudo code*

2/5/01 12:06 PM

1

pre and post incrementing and decrementing

- pre-increment, pre-decrement:

- operate, then use value
- examples:
`++i; --i;`

- post-increment, post-decrement:

- use value, then operate
- examples:
`i++; i--;`

2/5/01 12:06 PM

2

an example where it matters.

```
#include <stdio.h>
int main( void ) {
    int i;
    while ( i <= 3 ) {
        printf( "i = %d\n", ++i );
    } /* end of while */
} /* end of main() */
```

output is:
i = 2
i = 3
i = 4

2/5/01 12:06 PM

3

testing values.

```
#include <stdio.h>
int main( void ) {
    int x;
    printf( "enter a number:" );
    scanf( "%d", &x );
    if ( x % 2 == 0 ) {
        printf( "your number is even\n" );
    } /* end of if */
} /* end of main() */
```

2/5/01 12:06 PM

4

if syntax.

```
if ( <condition> ) {
    <statement1>;
    <statement2>;
    ...
} /* end of if */
```

2/5/01 12:06 PM

5

making choices: if/else.

```
#include <stdio.h>
int main( void ) {
    int x;
    printf( "enter a number:" );
    scanf( "%d", &x );
    if ( x % 2 == 0 ) {
        printf( "your number is even\n" );
    } /* end of if */
    else {
        printf( "your number is odd\n" );
    } /* end of else */
} /* end of main() */
```

2/5/01 12:06 PM

6

if/else syntax.

```
if (<condition>) {  
    <statement1>;  
    <statement2>;  
    ...  
} /* end of if */  
else {  
    <statement1>;  
    <statement2>;  
    ...  
} /* end of else */
```

2/5/01 12:06 PM

7

making more than two choices: if/elseif/else.

```
#include <stdio.h>  
int main( void ) {  
    int x;  
    printf( "enter a number:" );  
    scanf( "%d", &x );  
    if ( x == 0 ) {  
        printf( "your number is zero\n" );  
    } else if ( x % 2 == 0 ) {  
        printf( "your number is even\n" );  
    } /* end of if */  
    else {  
        printf( "your number is odd\n" );  
    } /* end of else */  
} /* end of main() */
```

2/5/01 12:06 PM

8

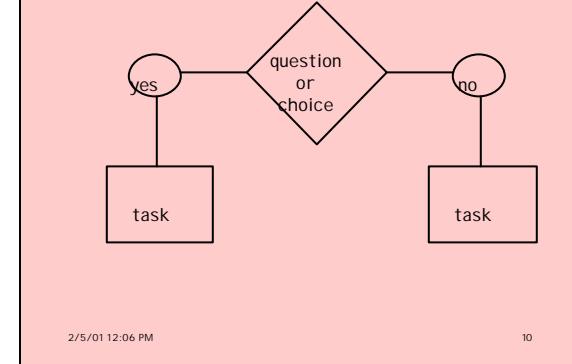

if/elseif/else syntax.

```
if (<condition>) {  
    <statement1>;  
    <statement2>;  
    ...  
} /* end of if */  
else if (<condition>) {  
    <statement1>;  
    <statement2>;  
    ...  
} /* end of else if */  
else {  
    <statement1>;  
    <statement2>;  
    ...  
} /* end of else */
```

2/5/01 12:06 PM

9

flow charts.

2/5/01 12:06 PM

10

pseudo code.

```
while ( user wants more ) {  
    read number from user  
    check if number is sentinel value  
    if it is, then set loop sentinel to FALSE  
    else, add number to sum and print  
        number and current sum  
}  
print grand total
```

2/5/01 12:06 PM

11

reading.

- material covered today:
 - DD: 3.1-3.6
- *assignment #3 is out today*
- *assignment #3 is due next WED 7 FEB*
- *exam #1 is next FRI 9 FEB*

2/5/01 12:06 PM
