cis3.2 electronic commerce 27 march 2006 lecture # 17 interaction mechanisms

topics:

- types of interaction mechanisms
- negotiation spaces
- terminology
- types of auctions
- issues
- case study

$slide\ credits$:

- Peter McBurney, Univ of Liverpool
- E-commerce 2004, Prentice Hall

 ${\it cis 3.2-spring 2006-sklar-lec 17}$

negotiation spaces

- 2 or more participants:
 - one buyer and one seller \Rightarrow auction
 - one *buyer* and multiple $sellers \Rightarrow \mathbf{auction}$
 - multiple buyers and one seller \Rightarrow auction
 - multiple buyers and multiple sellers \Rightarrow market
- what are the *rules* for interaction? i.e., *protocols*
- what are acceptable deals?
- what are *strategies* to help bring about these deals?
- what good(s) or service(s) are being traded?

cis3.2-spring2006-sklar-lec17

interaction mechanisms for commercial transactions

- transaction spaces
- auction mechanisms and their properties
- \bullet procedures or protocols :
 - auction protocols
 - negotiation protocols
- languages for transactions

cis3.2-spring2006-sklar-lec17

terminology (1)

• buyer:

person or agent who wants to purchase good(s) or service(s)

• seller:

person or agent who wants to sell good(s) or service(s)

trader

general term that refers to either/both buyers and sellers

• auctioneer

person or agent who controls the exchange of goods or *settling* or *clearing* of the auction or market; i.e., auctioneer sets the trading price and determines who will exchange with whom

cis3.2-spring2006-sklar-lec17

terminology (2)

bid:

amount that a buyer offers to pay for a good or service

- ask: amount that a seller offers to sell a good or service for
- shout: general term that refers to either/both bids and asks

cis 3.2-spring 2006-sklar-lec 17

types of auctions

- English auction
- Dutch auction
- first-price sealed-bid auction
- Vickrey auction

cis3.2-spring2006-sklar-lec17

terminology (3)

• private value:

the actual amount a trader values the good(s)/service(s) being traded; not necessarily the amount that the trader shouts

• transaction price:

the price set by the auctioneer for which a good or service is exchanged

winner.

buyer or seller who gets the good or service for which they are bidding; there may be multiple winners in an auction or market

efficiency:

the closer that trading prices come to traders' private values, the more efficient the market is

cis3.2-spring2006-sklar-lec17

English auction (1)

- ascending price auction
- also called: "open cry"
- procedure:
 - 1. auctioneer starts at $reserve\ price$ amount below which seller will not sell
 - potential buyers call out prices they are willing to pay, in ascending order; sometimes the auctioneer calls out prices in ascending order and potential buyers agree to prices as they are called
 - 3. until there are no more bids; or until there are no more buyers agreeing to prices being called
- winner is person who bids the highest amount
- winner pays the amount that s/he bid
- best strategy for a bidder: add a little to the previous bid

cis3.2-spring2006-sklar-lec17

8

English auction (2)

- additional rules:
 - sometimes, bids must exceed previous bids by a certain percentage
 - sometimes, buyers must declare when they are leaving the auction, i.e., when the price has exceeded what they are willing to pay

cis3.2-spring2006-sklar-lec17

first-price, sealed-bid auction

- procedure:
 - 1. bidders write their acceptable price on a piece of paper and submit it in a sealed envelope to the bidder
 - 2. auctioneer opens all envelopes and ranks the bids in price order
- winner is highest bidder
- winner pays price bid
- note: this is essentially equivalent to Dutch auction
- best strategy: bid below private value (acceptable price)

cis3.2-spring2006-sklar-lec17

Dutch auction

- descending price auction
- procedure:
 - 1. auctioneer starts at a high price and calls out prices in descending order
 - 2. buyer calls out as soon as auctioneer reaches acceptable price for buyer
 - 3. if there's a tie, then the auctioneer backs up some distance and descends again
- winner is first person to call out
- winner pays price bid (called)
- best strategy for a bidder: call out as soon as acceptable price is reached

cis3.2-spring2006-sklar-lec17

10

Vickrey auction

- bids ascend
- bids can be either "open cry" or "sealed"
- winner is the one with highest bid
- BUT winner pays second highest
- best strategy: bid truthfully!

cis3.2-spring2006-sklar-lec17

12

issues

- winner's curse
- signalling
- poor planning
- illegal activities

cis3.2-spring2006-sklar-lec17

cis3.2-spring2006-sklar-lec17

signalling

- bidders encode messages in their bids
- example: US mobile licenses

 - GTE's bids were not: e.g., $\$25{,}000{,}483$

- most bids were round numbers, e.g., \$25,000,000
- signalling: $4 8 3 \Rightarrow G T E$

"winner's curse"

- winner pays much more than his private value
- \bullet problem with all three of the above types of auction
- example:
 - mobile license auction in New Zealand (1994)
 - winner's bid: \$7M
 - second-highest bid: \$5,000
- Vickrey auctions reduce effect of winner's curse

cis3.2-spring2006-sklar-lec17

poor planning

- example: Australian pay tv licenses
 - anonymous sealed-bid auction
 - winning bidder couldn't be found
 - government didn't anticipate multiple bids or false bidders

cis3.2-spring2006-sklar-lec17

illegal activities

- buyer collusion
- \bullet auctioneer lying

cis3.2-spring2006-sklar-lec17

case study: eBay (2)

- process
 - seller registers item description and minimum opening bid price
 - buyers register bids online
 - after price is agreed, traders negotiate other aspects of the trade (e.g.):
 - * payment method
 - * shipping details
 - * warranty
 - designed for C2C

cis3.2-spring2006-sklar-lec17

case study: eBay (1)

- world's largest auction site
- started by collector of "Pez" dispensers
- e-business auction
- originally mostly C2C auctions
- ullet company collects $submission\ fee$ up front
- ullet company collects $commission\ fee$ as a percentage of sales

cis3.2-spring2006-sklar-lec17

case study: eBay (3)

- \bullet seller payment protection plan introduced in 2002
 - credit card protection
 - secure processing
- privacy
- new directions
 - http://www.ebaybusiness.com
 - business-related listings
 - geared for B2B
