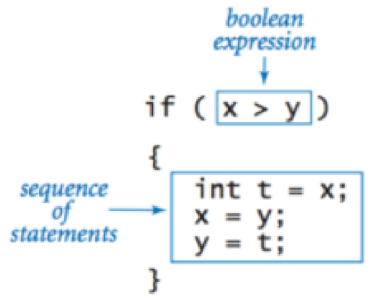
Anatomy of an if statement.

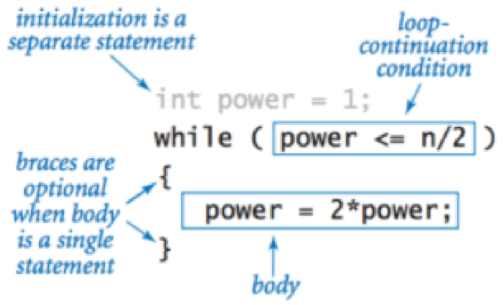


```
if ( x > y )
{
   int t = x;
   x = y;
   y = t;
}
```

Nested if-else statement.

```
if      (income <      0) rate = 0.00;
else if (income <   8925) rate = 0.10;
else if (income <  36250) rate = 0.15;
else if (income <  87850) rate = 0.23;
else if (income < 183250) rate = 0.28;
else if (income < 398350) rate = 0.33;
else if (income < 400000) rate = 0.35;
else                      rate = 0.396;
```

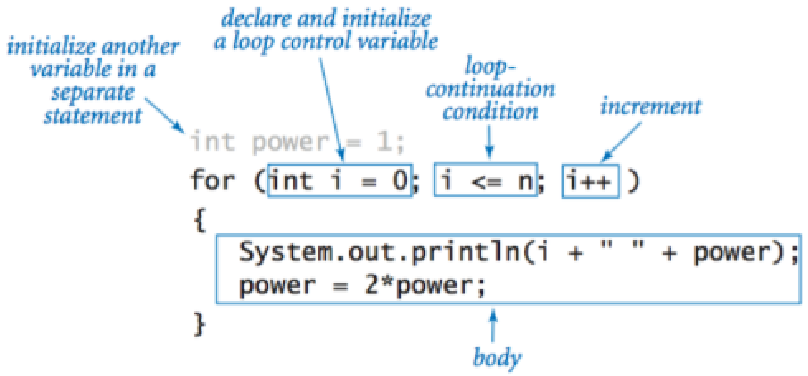
Anatomy of a while loop.



```
int power = 1;
while ( power <= n/2 )
{
   power = 2*power;
}
```

initialization is a separate statement
loop-continuation condition
braces are optional when body is a single statement
body

Anatomy of a for loop.

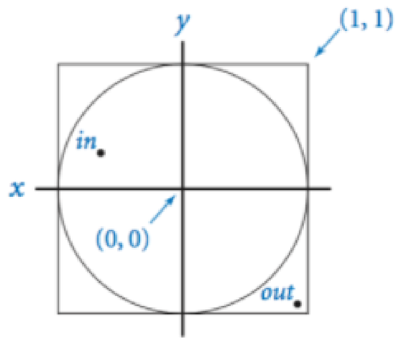


initialize another variable in a separate statement
declare and initialize a loop control variable
loop-continuation condition
increment
body

```
int power = 1;
for (int i = 0; i <= n; i++ )
{
   System.out.println(i + " " + power);
   power = 2*power;
}
```

Do-while loop.

```
do
{  // Scale x and y to be random in (-1, 1).
   x = 2.0*Math.random() - 1.0;
   y = 2.0*Math.random() - 1.0;
} while (Math.sqrt(x*x + y*y) > 1.0);
```



Break statement.

```
int factor;
for (factor = 2; factor <= n/factor; factor++)
   if (n % factor == 0) break;

if (factor > n/factor)
   System.out.println(n + " is prime");
```

Continue statement.

```
for (;;){
    s += i;
    if (i<=5) continue;
    i--;
  }
```
