CISC 3415
HW Assignment – 1 (2pts)

1. Write down an example of a robot, either from the fictional world (from a book, a play, a film, a television show and so on) or from the real world. Please provide the information about the source of your example.

Describe this example, and specifically in your own words, say
(a) what kind of sensors it uses (or should use, if it’s not given in the source), and
(b) which of the robots we covered in class it most closely resembles (and why you think this).

The fewer other people who use the same example as you, and the more detailed your description is (no more than one page in single space though), the more credit you will get. As always, you don’t need to copy the HW questions themselves in your submission.
